Amphitheater Specs:

Stage: The stage deck is 4' off the ground, 56' wide by 36' deep, with sound wings 12' wide by 16' deep, stage right and 12' wide by 14' deep, stage left. A loading dock 16' wide by 20' deep up stage left, allows a maximum of two tractor trailers to be unloaded at the same time, via a ramp. The stage is constructed of a Staging Concepts SC9600 support structure with SC90 decking, capable of a live load capacity of 155 pounds per square foot.

Rigging: The curved enclosure, over the stage, reaches a height of approximately 40' at the center, and the I-beams decrease in height the further off stage they are. Seven I-beams run upstage/downstage on 10' centers. The "center" beam is 9" stage right of the center line. Their measurements from the stage deck are:

- 30'6" at center
- 29' at 10' SL and SR of center
- 26'6" at 20' SL and SR of center
- 19' at 30' SL and SR of center

(Note: The offstage I-beam SL and SR increases to 22'6" at the downstage edge for sound rigging)

The maximum allowable weight per point is 2,000 lbs., with a minimum spacing of 5'. The maximum allowable weight per beam is 6,000 lbs. The amphitheater roof is capable of a total maximum load of 20,000 lbs. No bridles are allowed. A rigging diagram of the amphitheater is available upon request.

Lighting: No lighting provided, in house. See promoter for rental.

Sound: No sound is provided, in house. See promoter for rental.

Company Switches:

Lighting: 2 - 400 amp 3 phase 5 wire (Up Stage Right)

Sound: 1 - 200 amp 3 phase 5 wire (Up Stage Right)

Shore Power: A limited amount is available.
